MEDICAL INCUNABULA

IN THE SURGEON GENERAL'S LIBRARY

[1918]

THE following check list of incunabula in the Surgeon General's Library is compiled not only for the convenience of the library, to enable us to state at a glance what it possesses of early printed books, but also in the interest of the students of medical history. The list does not make a pretentious claim to bibliography.

Dr. Arnold C. Klebs has in preparation a bibliography of all medical incunabula, including those in our library and those in other American libraries, in which the entries will be given in full.

As I have already stated in my paper "On Incunabula," published in the *Bulletin of the Medical Library Association*, N. S., Vol. V, No. 1 (July, 1915), the first attempt at listing medical incunabula was made by the late J. Stockton Hough of Trenton, New Jersey.

It cannot be the aim of our library, just as it cannot be the aim of any library, no matter how large its endowment or appropriation, to own all the incunabula in existence, especially when one takes into

[1]

406104 c.1

account the fact that there are about 28,000 of these rare volumes, and that in some instances only a few copies have been preserved and in some, only one. Prof. Karl Sudhoff, of Leipzig, estimated the number of medical incunabula at about 2,000. We are inclined to place the number much lower, but refrain from giving any approximate figure.

Early printed books must be judged from two points of view; first, from the standpoint of the intrinsic value of the book itself, and, second, from a bibliographical standpoint. This must be the guiding principle for a special library like ours, when making a collection of incunabula. If possible, every printer and every town should be represented by a good specimen dealing with the subject in which the library in question is most interested.

On this principle the incunabula for the library of the Surgeon General's Office were collected; notwithstanding the limited means I have tried to enlarge our collection of early printed books and during my administration have succeeded in increasing the number of our incunabula.

This list is published in the ANNALS OF MEDICAL HISTORY to give the material a

wider circulation among readers of medical literature. I hope that other lists of the medical incunabula available in public and private libraries may be presented to the public through this medium so that the files of the ANNALS will eventually contain a complete bibliography of the medical incunabula in this country.
